

Tirrena organizes and carries out Project Cargo shipments of heavy or oversized loads, by air, land and sea (with container ships or conventional ones) to any destination.

The company is able to carry out the "door to door" handling of plants and machinery, factory modules, components of the oil & gas / steel / mechanical / nautical industries and many others, also dealing with the storage and stationing of goods in the port or in warehouses awaiting shipment.

The Project Cargo service presents complexities and criticalities that Tirrena manages on behalf of the client in order to guarantee the success of the operations: from the feasibility evaluation of the project to the documental and logistic planning, from insurance assistance to the request for special permits and customs consultancy, to finally arrive at the delivery of the goods.

Thanks to the technical-engineering know-how of its team, to the partnerships with the most important operators of the sector, to the careful evaluation of risks and to the deep knowledge of the legislation of the countries involved in the operations, Tirrena is able to produce customized logistic solutions highly optimized in costs and timing, with the aim of offering to its customers the best operational and economic conditions.

The Project Cargo offered by Tirrena does not fear size or distance: it is a great service to meet great needs.
